① Before we start...

② Programming Paradigms

What did you learn during last lecture ?
Any questions ?

Last Lecture Doggy bag

Functions

- Function definition and calling
- Parameters and arguments
- Variadic arguments
- Python scopes

Advanced strings

- Special characters handling
- String formatting

① Before we start...

② Programming Paradigms

Definition

From Wikipedia¹

A programming paradigm is a relatively high-level way to conceptualize and structure the implementation of a computer program. A programming language can be classified as supporting one or many paradigms.

Definition

From Wikipedia¹

A programming paradigm is a relatively high-level way to conceptualize and structure the implementation of a computer program. A programming language can be classified as supporting one or many paradigms.

Each programming paradigm has its own features.
Several programming paradigms can be used together.

Procedural Paradigm

How it works

- Work by using procedures
- Each procedure contains steps to perform
- Each procedure can be:
 - Called at any moment
 - By any procedure, even by itself (recursivity)

Procedural programming languages

- C
- Pascal
- Unix (sh)

Declarative Paradigm

How it works

-
